

Closing the Gender Gap Accelerator

Japan

Key Objectives: Closing the Gender Gap

The accelerator model focuses on identifying specific leverage points and creating collaborative action across four key areas:

Hardwire gender parity in the post COVID-19 world of work

Close gender gaps in remuneration between and within sectors

Enable women's participation in the labour force

Advance more women into management and leadership positions

Note: The model *does not* focus on broader issues related to gender equality such as health or gender based violence. The model is currently designed to tackle the most urgent issues around economic gender gaps first (current workforce) while exploring possibilities for the future workforce.

Key national public and private actors will be called on to **champion and participate** in the Accelerator

Set the direction

Enable and drive

Commit and implement

The Global Learning Network brings together all Country Accelerators in an integrated learning, sharing and co-creating network.

Global Learning Network of Closing the Gender Gap Accelerators
